

# REST ASSURED API AUTOMATION PROJECT

---

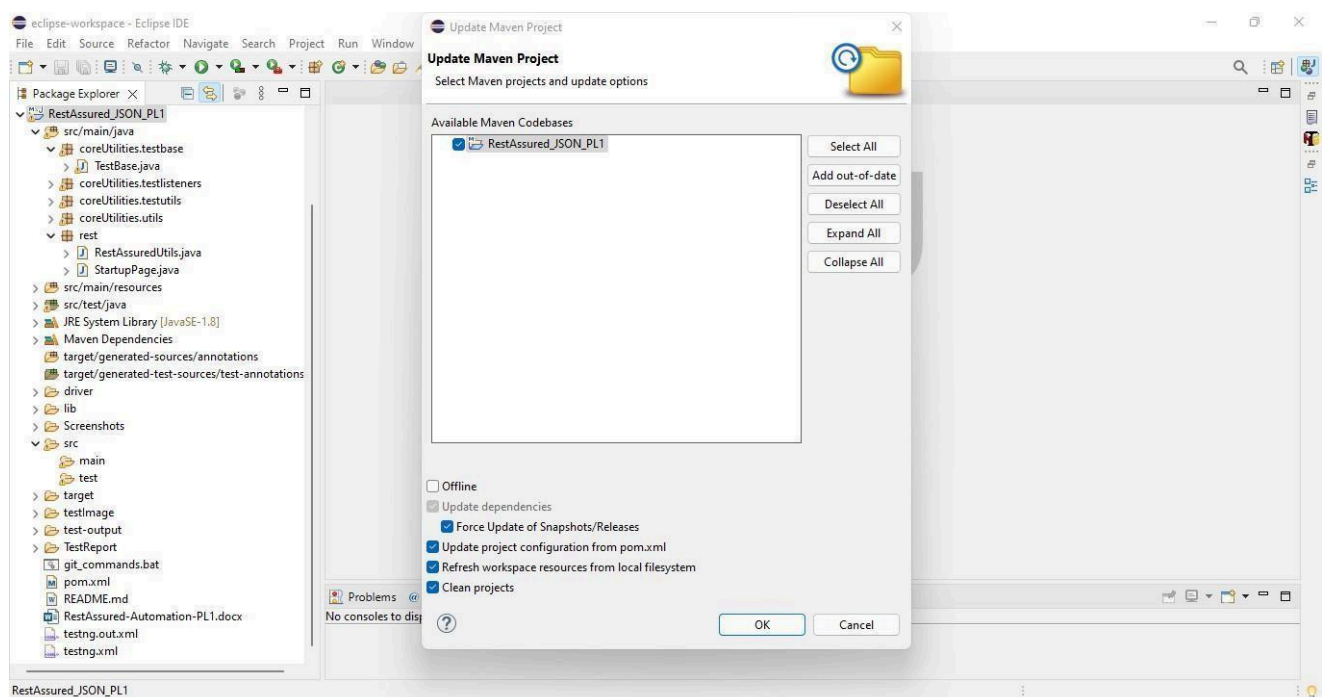

## Pre-requisite:

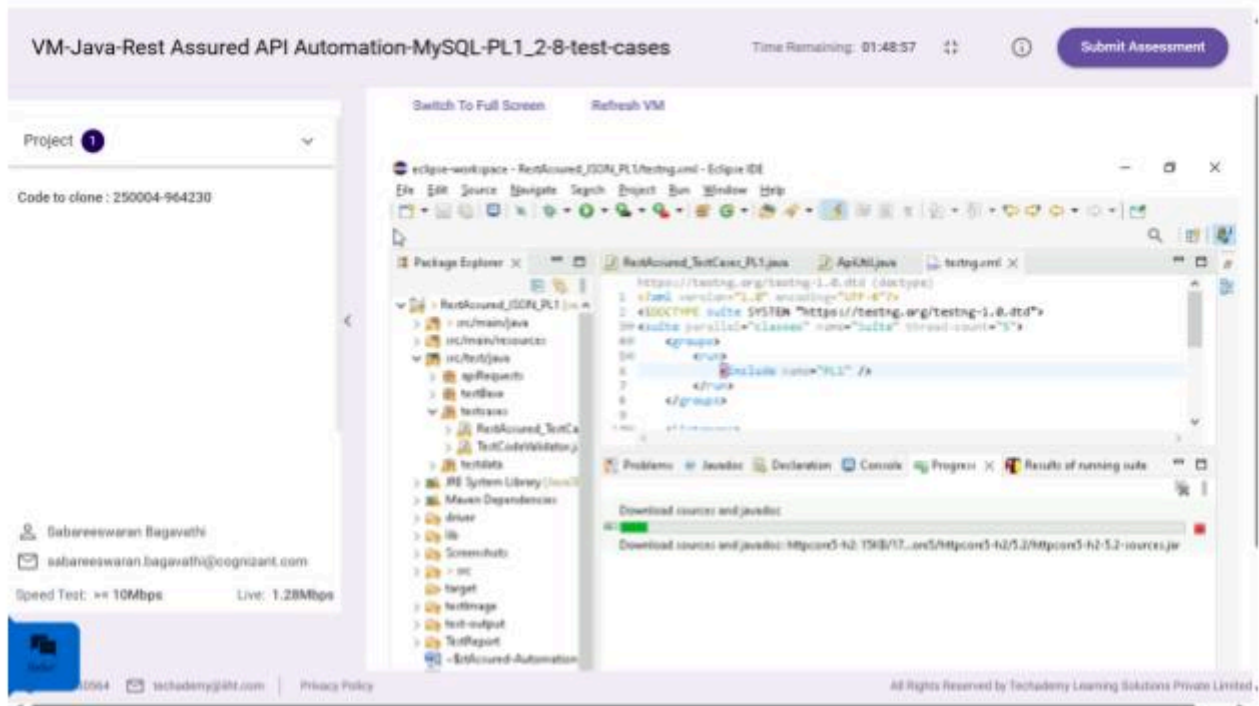

As soon as you import a project in eclipse, update the project using the maven update option as below. This is to resolve issue if any maven dependency not downloaded properly:

1. Right click on project : Go to “Maven” : Select “Update Project”

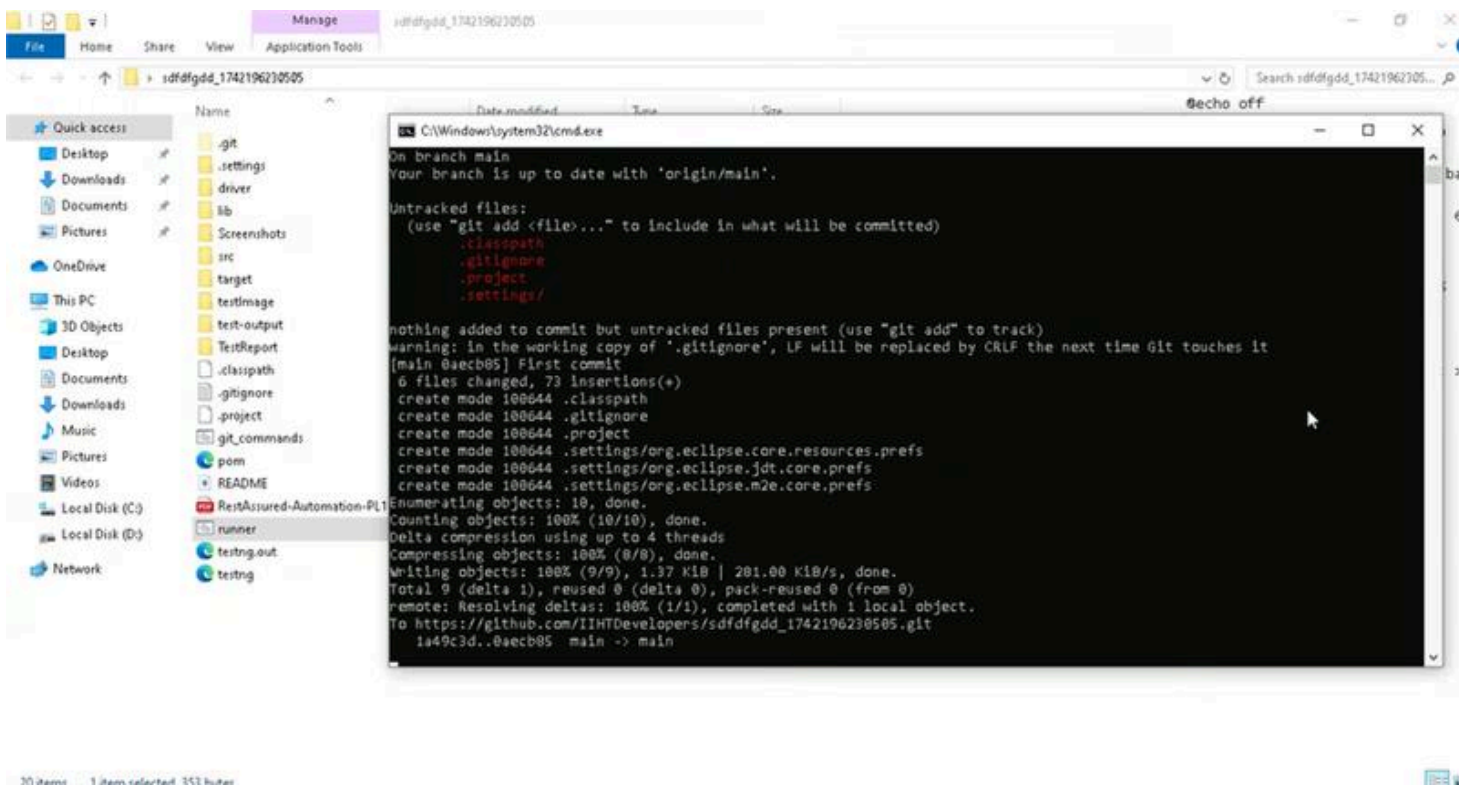

2. In Update Maven Project Box Select “Force Update of Snapshots/Releases” and click OK

**Note:** Once all the project dependencies are downloaded you may find certain documentation jar files getting downloaded which may continue for a longer time. This is the known behaviour. This will not block your application development activity. You can ignore it and continue working on your application.

**\*\* Before starting any implementation. Please execute this “runner” file present in the cloned folder. This will keep pushing the changes at regular intervals.**

## Template Code Structure:

- a. Below are the packages and files you will be required to work upon.
- b. Other Files and packages you can ignore.
- c. In other Files and packages do not do any changes. It would affect your evaluation.
- d. You are not required to work in “Test” Folder. Files there are non-editable. Editing those files and trying to save them will throw error and would affect your evaluation.

Package	Class/File	Description
/src/main/java/rest	ApiUtil.java	<ol style="list-style-type: none"><li>1. All core activities to be performed here.</li><li>2. The comments associated with each templated method here describe the expectation.</li><li>3. Declare any variable/object you need to share data/status between different methods.</li><li>4. Do not modify the signature of methods declared here.</li><li>5. You can create additional supportive common methods in CommonEvents class.</li></ol>
/src/main/java/rest	AuthUtil.java	<ol style="list-style-type: none"><li>1. Class already defined to read and return bearer token from</li></ol>

		config.properties file.
/src/main/java/rest	CustomResponse	We have already created custom response object class. You need to use this and use it as return type from ApiUtil.java class methods.
/src/main/resources/	Config.xlsx	Data present to be used in Implementing functions.

/src/main/java/coreUtilities/utills	CommonEvents.java	<ol style="list-style-type: none"> <li>1. Contains all common activities.</li> <li>2. Certain templated common methods declared here.</li> <li>3. You implement them as per your need.</li> <li>4. You can add any additional method for common activity here</li> </ol>
	Testng.xml	Execution needs to kick started from TestNG xml

## PROBLEM STATEMENT

Need to automate the following activities using RestAssured.

## Key Activities to implement:

Below activities need to be implemented in the ApiUtil.java file present in src/main/java/rest package.

SI No.	Summary	Action	Expected Result
1	Retrieve all stocks in Method:  getAllStocks(String endpoint, Object body)	<ol style="list-style-type: none"> <li>1. Call the GET on endpoint i.e <b>https://healthapp.yaksha.com/api/PharmacyStock/AllStockDetails</b></li> <li>2. Include a bearer token for authentication in authorization header.</li> <li>3. Trigger a GET call to the specified endpoint.</li> <li>4. Create an object of type CustomResponse and initialize it with values extracted from the Response object: <ul style="list-style-type: none"> <li>• Response</li> <li>• statusCode (extracted from Response object)</li> <li>• Status (extracted from Response object)</li> <li>• Results as List&lt;Map&lt;String, Object&gt;&gt; (extracted from Response object)</li> </ul> </li> <li>5. Return the CustomResponse object from the method.</li> </ol>	<ul style="list-style-type: none"> <li>- Returns an object of type CustomResponse containing statusCode, status, Results and the complete Response object.</li> <li>- StatusCode should be 200.</li> <li>- Status should be OK.</li> </ul>

2	<p>Retrieve all stocks in Method:</p> <p><code>getMainStore(String endpoint, Object body)</code></p>	<ol style="list-style-type: none"> <li>1. Call the GET on endpoint i.e <b><code>https://healthapp.yaksha.com/api/PharmacySettings/MainStore</code></b></li> <li>2. Include a bearer token for authentication in authorization header.</li> <li>3. Trigger a GET call to the specified endpoint.</li> <li>4. Create an object of type CustomResponse and initialize it with values extracted from the Response object: <ul style="list-style-type: none"> <li>• Response</li> <li>• statusCode (extracted from Response object)</li> <li>• Status (extracted from Response object)</li> <li>• Results as Map&lt;String, Object&gt; (extracted from Response object)</li> </ul> </li> <li>5. Return the CustomResponse object from the method.</li> </ol>	<ul style="list-style-type: none"> <li>- Returns an object of type CustomResponse containing statusCode, status, Results and the complete Response object.</li> <li>- StatusCode should be 200.</li> <li>- Status should be OK.</li> </ul>
3	<p>Retrieve requisition list in Method:</p> <p><code>getRequisitionByDateRange(String endpoint, Object body)</code></p>	<ol style="list-style-type: none"> <li>1. Call the GET on endpoint i.e <b><code>https://healthapp.yaksha.com/api/DispensaryRequisition/Dispensary/1?FromDate=" + fromDate + "&amp;ToDate=" + toDate</code></b></li> <li>2. Include a bearer token for authentication in authorization header.</li> <li>3. Trigger a GET call to the specified endpoint.</li> <li>4. Create an object of type CustomResponse and initialize it with values extracted from the Response object: <ul style="list-style-type: none"> <li>• Response</li> <li>• statusCode (extracted from Response object)</li> <li>• Status (extracted from Response object)</li> <li>• Results.requisitionList as List&lt;Map&lt;String, Object&gt;&gt; (extracted from Response object)</li> </ul> </li> <li>5. Return the CustomResponse object from the method.</li> </ol>	<ul style="list-style-type: none"> <li>- Returns an object of type CustomResponse containing statusCode, status, Results.requisitionList and the complete Response object.</li> <li>- StatusCode should be 200.</li> <li>- Status should be OK.</li> </ul>

4	<p>Retrieve patient consumptions in Method:</p> <p><code>getPatientConsumptions(String endpoint, Object body)</code></p>	<ol style="list-style-type: none"> <li>1. Call the GET on endpoint i.e <b><code>https://healthapp.yaksha.com/api/PatientConsumption/PatientConsumptions</code></b></li> <li>2. Include a bearer token for authentication in authorization header.</li> <li>3. Trigger a GET call to the specified endpoint.</li> <li>4. Create an object of type CustomResponse and initialize it with values extracted from the Response object: <ul style="list-style-type: none"> <li>• Response</li> <li>• statusCode (extracted from Response object)</li> <li>• Status (extracted from Response object)</li> <li>• Results as List&lt;Map&lt;String, Object&gt;&gt; (extracted from Response object)</li> </ul> </li> <li>5. Return the CustomResponse object from the method.</li> </ol>	<ul style="list-style-type: none"> <li>- Returns an object of type CustomResponse containing statusCode, status, Results and the complete Response object.</li> <li>- StatusCode should be 200.</li> <li>- Status should be OK.</li> </ul>
5	<p>Retrieve patient consumption info in Method:</p> <p><code>getPatientConsumptionInfoByPatientIdAndVisitId(String endpoint, Object body)</code></p>	<ol style="list-style-type: none"> <li>1. Call the GET on endpoint i.e <b><code>https://healthapp.yaksha.com/api/PatientConsumption/PatientConsumptionInfo?patientId="+ patientId + "&amp;patientVisitId="+ patientVisitId</code></b></li> <li>2. Include a bearer token for authentication in authorization header.</li> <li>3. Trigger a GET call to the specified endpoint.</li> <li>4. Create an object of type CustomResponse and initialize it with values extracted from the Response object: <ul style="list-style-type: none"> <li>• Response</li> <li>• statusCode (extracted from Response object)</li> <li>• Status (extracted from Response object)</li> <li>• Results.PatientConsumption as Map&lt;String, Object&gt; (extracted from Response object)</li> </ul> </li> <li>5. Return the CustomResponse object from the method.</li> </ol>	<ul style="list-style-type: none"> <li>- Returns an object of type CustomResponse containing statusCode, status, Results.PatientConsumption and the complete Response object.</li> <li>- StatusCode should be 200.</li> <li>- Status should be OK.</li> </ul>

6	<p>Search for a Patient with Authorization in Method:</p> <p>getBillingSchemeBySchemeId(String endpoint, Object body)</p>	<ol style="list-style-type: none"> <li>1. Call the GET on endpoint i.e <b><a +="" href="https://healthapp.yaksha.com/api/PatientConsumption/PharmacyBillingScheme?schemeld=" schemeld"="">https://healthapp.yaksha.com/api/PatientConsumption/PharmacyBillingScheme?schemeld=" + schemeld</a></b></li> <li>2. Include a bearer token for authentication in authorization header.</li> <li>3. Trigger a GET call to the specified endpoint.</li> <li>4. Create an object of type CustomResponse and initialize it with values extracted from the Response object: <ul style="list-style-type: none"> <li>• Response</li> <li>• statusCode (extracted from Response object)</li> <li>• Status (extracted from Response object)</li> <li>• Results as Map&lt;String, Object&gt; (extracted from Response object)</li> </ul> </li> <li>5. Return the CustomResponse object from the method.</li> </ol>	<ul style="list-style-type: none"> <li>- Returns an object of type CustomResponse containing statusCode, status, Results and the complete Response object.</li> <li>- StatusCode should be 200.</li> <li>- Status should be OK.</li> </ul>
7	<p>Search for a Patient with Authorization in Method:</p> <p>getBillingSummaryByPatientId(String endpoint, Object body)</p>	<ol style="list-style-type: none"> <li>1. Call the GET on endpoint i.e <b><a +="" href="https://healthapp.yaksha.com/api/PharmacySales/PatientBillingSummary?patientId=" patientid"="">https://healthapp.yaksha.com/api/PharmacySales/PatientBillingSummary?patientId=" + patientId</a></b></li> <li>2. Include a bearer token for authentication in authorization header.</li> <li>3. Trigger a GET call to the specified endpoint.</li> <li>4. Create an object of type CustomResponse and initialize it with values extracted from the Response object: <ul style="list-style-type: none"> <li>• Response</li> <li>• statusCode (extracted from Response object)</li> <li>• Status (extracted from Response object)</li> <li>• Results as Map&lt;String, Object&gt; (extracted from Response object)</li> </ul> </li> <li>5. Return the CustomResponse object from the method.</li> </ol>	<ul style="list-style-type: none"> <li>- Returns an object of type CustomResponse containing statusCode, status, Results and the complete Response object.</li> <li>- StatusCode should be 200.</li> <li>- Status should be OK.</li> </ul>

8	<p>Search for a Patient with Authorization in Method:</p> <p>getConsumptionsListOfAPatientByld(String endpoint, Object body)</p>	<ol style="list-style-type: none"> <li>1. Call the GET on endpoint i.e <b><a +patientid+"&amp;patientvisitid="+patientVisitId" href="https://healthapp.yaksha.com/api/PatientConsumption/ConsumptionOfPatient?patientId=">https://healthapp.yaksha.com/api/PatientConsumption/ConsumptionOfPatient?patientId="+patientId+"&amp;patientVisitId="+patientVisitId</a></b></li> <li>2. Include a bearer token for authentication in authorization header.</li> <li>3. Trigger a GET call to the specified endpoint.</li> <li>4. Create an object of type CustomResponse and initialize it with values extracted from the Response object: <ul style="list-style-type: none"> <li>• Response</li> <li>• statusCode (extracted from Response object)</li> <li>• Status (extracted from Response object)</li> <li>• Results as List&lt;Map&lt;String, Object&gt;&gt; (extracted from Response object)</li> </ul> </li> <li>5. Return the CustomResponse object from the method.</li> </ol>	<ul style="list-style-type: none"> <li>- Returns an object of type CustomResponse containing statusCode, status, Results and the complete Response object.</li> <li>- StatusCode should be 200.</li> <li>- Status should be OK.</li> </ul>
9	<p>Search for a Patient with Authorization in Method:</p> <p>getReturnConsumptionsList (String endpoint, Object body)</p>	<ol style="list-style-type: none"> <li>1. Call the GET on endpoint i.e <b><a href="https://healthapp.yaksha.com/api/PatientConsumption/Returns">https://healthapp.yaksha.com/api/PatientConsumption/Returns</a></b></li> <li>2. Include a bearer token for authentication in authorization header.</li> <li>3. Trigger a GET call to the specified endpoint.</li> <li>4. Create an object of type CustomResponse and initialize it with values extracted from the Response object: <ul style="list-style-type: none"> <li>• Response</li> <li>• statusCode (extracted from Response object)</li> <li>• Status (extracted from Response object)</li> <li>• Results as List&lt;Map&lt;String, Object&gt;&gt; (extracted from Response object)</li> </ul> </li> <li>5. Return the CustomResponse object from the method.</li> </ol>	<ul style="list-style-type: none"> <li>- Returns an object of type CustomResponse containing statusCode, status, Results and the complete Response object.</li> <li>- StatusCode should be 200.</li> <li>- Status should be OK.</li> </ul>

10	<p>Search for a Patient with Authorization in Method:</p> <p>getDischargedPatients(String endpoint, Object body)</p>	<ol style="list-style-type: none"> <li>1. Call the GET on endpoint i.e <b><a "&amp;todate=" + toDate" +="" fromdate="" href="https://healthapp.yaksha.com/api/Admission/DischargedPatients?admissionStatus=discharged&amp;FromDate=">https://healthapp.yaksha.com/api/Admission/DischargedPatients?admissionStatus=discharged&amp;FromDate=" + fromDate + "&amp;ToDate=" + toDate</a></b></li> <li>2. Include a bearer token for authentication in authorization header.</li> <li>3. Trigger a GET call to the specified endpoint.</li> <li>4. Create an object of type CustomResponse and initialize it with values extracted from the Response object: <ul style="list-style-type: none"> <li>• Response</li> <li>• statusCode (extracted from Response object)</li> <li>• Status (extracted from Response object)</li> <li>• Results as List&lt;Map&lt;String, Object&gt;&gt; (extracted from Response object)</li> </ul> </li> <li>5. Return the CustomResponse object from the method.</li> </ol>	<ul style="list-style-type: none"> <li>- Returns an object of type CustomResponse containing statusCode, status, Results and the complete Response object.</li> <li>- StatusCode should be 200.</li> <li>- Status should be OK.</li> </ul>
11	<p>Search for a Patient with Authorization in Method:</p> <p>getFilmTypesInRadiology(String endpoint, Object body)</p>	<ol style="list-style-type: none"> <li>1. Call the GET on endpoint i.e <b><a href="https://healthapp.yaksha.com/api/radiology/FilmTypes">https://healthapp.yaksha.com/api/radiology/FilmTypes</a></b></li> <li>2. Include a bearer token for authentication in authorization header.</li> <li>3. Trigger a GET call to the specified endpoint.</li> <li>4. Create an object of type CustomResponse and initialize it with values extracted from the Response object: <ul style="list-style-type: none"> <li>• Response</li> <li>• statusCode (extracted from Response object)</li> <li>• Status (extracted from Response object)</li> <li>• Results as List&lt;Map&lt;String, Object&gt;&gt; (extracted from Response object)</li> </ul> </li> <li>5. Return the CustomResponse object from the method.</li> </ol>	<ul style="list-style-type: none"> <li>- Returns an object of type CustomResponse containing statusCode, status, Results and the complete Response object.</li> <li>- StatusCode should be 200.</li> <li>- Status should be OK.</li> </ul>

12	<p>Search for a Patient with Authorization in Method:</p> <p>getRequisitionsByOrderStatusAndDateRange(String endpoint, Object body)</p>	<ol style="list-style-type: none"> <li>6. Call the GET on endpoint i.e <b><code>https://healthapp.yaksha.com/api/radiology/Requisitions?reqOrderStatus=" + orderStatus + "&amp;reportOrderStatus=" + reportOrderStatus+"&amp;typeList="+typeList+"&amp;fromDate="+fromDate + "&amp;toDate=" +toDate</code></b></li> <li>7. Include a bearer token for authentication in authorization header.</li> <li>8. Trigger a GET call to the specified endpoint.</li> <li>9. Create an object of type CustomResponse and initialize it with values extracted from the Response object: <ul style="list-style-type: none"> <li>• Response</li> <li>• statusCode (extracted from Response object)</li> <li>• Status (extracted from Response object)</li> <li>• Results as List&lt;Map&lt;String, Object&gt;&gt; (extracted from Response object)</li> </ul> </li> <li>10. Return the CustomResponse object from the method.</li> </ol>	<ul style="list-style-type: none"> <li>- Returns an object of type CustomResponse containing statusCode, status, Results and the complete Response object.</li> <li>- StatusCode should be 200.</li> <li>- Status should be OK.</li> </ul>
13	<p>Search for a Patient with Authorization in Method:</p> <p>getImagingReportsWithStatusAndDateRange(String endpoint, Object body)</p>	<ol style="list-style-type: none"> <li>1. Call the GET on endpoint i.e <b><code>https://healthapp.yaksha.com/api/radiology/ImagingReports?reportOrderStatus=" + reportOrderStatus + "&amp;fromDate=" + fromDate+"&amp;toDate="+toDate+ "&amp;typeList=" + typeList</code></b></li> <li>2. Include a bearer token for authentication in authorization header.</li> <li>3. Trigger a GET call to the specified endpoint.</li> <li>4. Create an object of type CustomResponse and initialize it with values extracted from the Response object: <ul style="list-style-type: none"> <li>• Response</li> <li>• statusCode (extracted from Response object)</li> <li>• Status (extracted from Response object)</li> <li>• Results as List&lt;Map&lt;String, Object&gt;&gt; (extracted from Response object)</li> </ul> </li> </ol>	<ul style="list-style-type: none"> <li>- Returns an object of type CustomResponse containing statusCode, status, Results and the complete Response object.</li> <li>- StatusCode should be 200.</li> <li>- Status should be OK.</li> </ul>

		5. Return the CustomResponse object from the method.	
14	<p>Search for a Patient with Authorization in Method:</p> <p>getAdmittedPatientData(String endpoint, Object body)</p>	<ol style="list-style-type: none"> <li>1. Call the GET on endpoint i.e <b><a href="https://healthapp.yaksha.com/api/Billing/InPatientProvisionalItems?patientId=176&amp;patientVisitId=">https://healthapp.yaksha.com/api/Billing/InPatientProvisionalItems?patientId=176&amp;patientVisitId=</a></b> + <b>visitId + "&amp;module=" + module</b></li> <li>2. Include a bearer token for authentication in authorization header.</li> <li>3. Trigger a GET call to the specified endpoint.</li> <li>4. Create an object of type CustomResponse and initialize it with values extracted from the Response object: <ul style="list-style-type: none"> <li>• Response</li> <li>• statusCode (extracted from Response object)</li> <li>• Status (extracted from Response object)</li> <li>• Results as Map&lt;String, Object&gt; (extracted from Response object)</li> </ul> </li> <li>5. Return the CustomResponse object from the method.</li> </ol>	<p>- Returns an object of type CustomResponse containing statusCode, status, Results and the complete Response object.</p> <p>- StatusCode should be 200.</p> <p>- Status should be OK.</p>
15	<p>Search for a Patient with Authorization in Method:</p> <p>getInPatientProvItems(String endpoint, Object body)</p>	<ol style="list-style-type: none"> <li>11. Call the GET on endpoint i.e <b><a href="https://healthapp.yaksha.com/api/Billing/InPatientProvisionalItems?patientId=176&amp;patientVisitId=147&amp;module=radiology">https://healthapp.yaksha.com/api/Billing/InPatientProvisionalItems?patientId=176&amp;patientVisitId=147&amp;module=radiology</a></b></li> <li>12. Include a bearer token for authentication in authorization header.</li> <li>13. Trigger a GET call to the specified endpoint.</li> <li>14. Create an object of type CustomResponse and initialize it with values extracted from the Response object: <ul style="list-style-type: none"> <li>• Response</li> <li>• statusCode (extracted from Response object)</li> <li>• Status (extracted from Response object)</li> <li>• Results.BillItems as List&lt;Map&lt;String, Object&gt;&gt; (extracted from Response object)</li> </ul> </li> <li>15. Return the CustomResponse object from the method.</li> </ol>	<p>- Returns an object of type CustomResponse containing statusCode, status, Results.BillItems and the complete Response object.</p> <p>- StatusCode should be 200.</p> <p>- Status should be OK.</p>

**NOTE: "Please do not delete any file in the src folder. But you are free to add any other file".**

## Expectations:

- 1) **Learners should write automation scripts using Java and REST Assured to automate the API testing for all the provided methods (e.g., GET, POST, PUT, DELETE).** In other words, the automation script should perform all mentioned API interactions, including validation of responses.
  - 2) **Learners should not use any pre-built libraries or tools to validate API responses (e.g., JSON schema validation tools).** They should manually validate the response content (e.g., status codes, response body, etc.) by writing their own logic for assertion.
- 

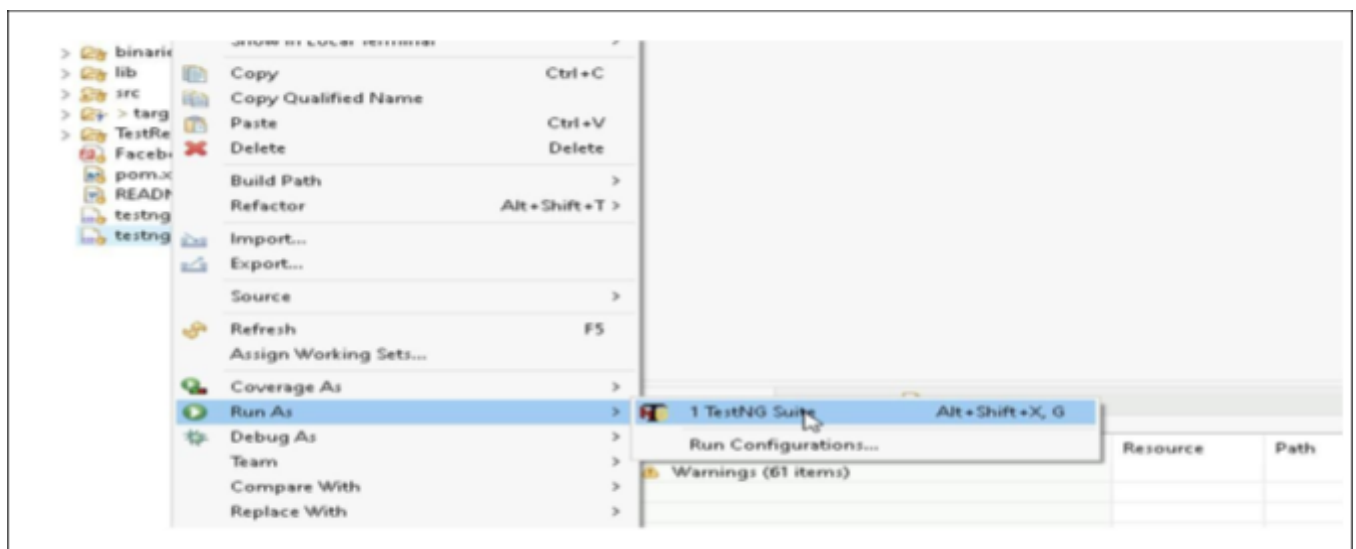

## IMPLEMENTATION/FUNCTIONAL REQUIREMENT

### 1.1 CODE QUALITY/OPTIMIZATIONS

1. Associates should have written clean code that is readable.
2. Associates need to follow SOLID programming principles.

## EXECUTION STEPS TO FOLLOW

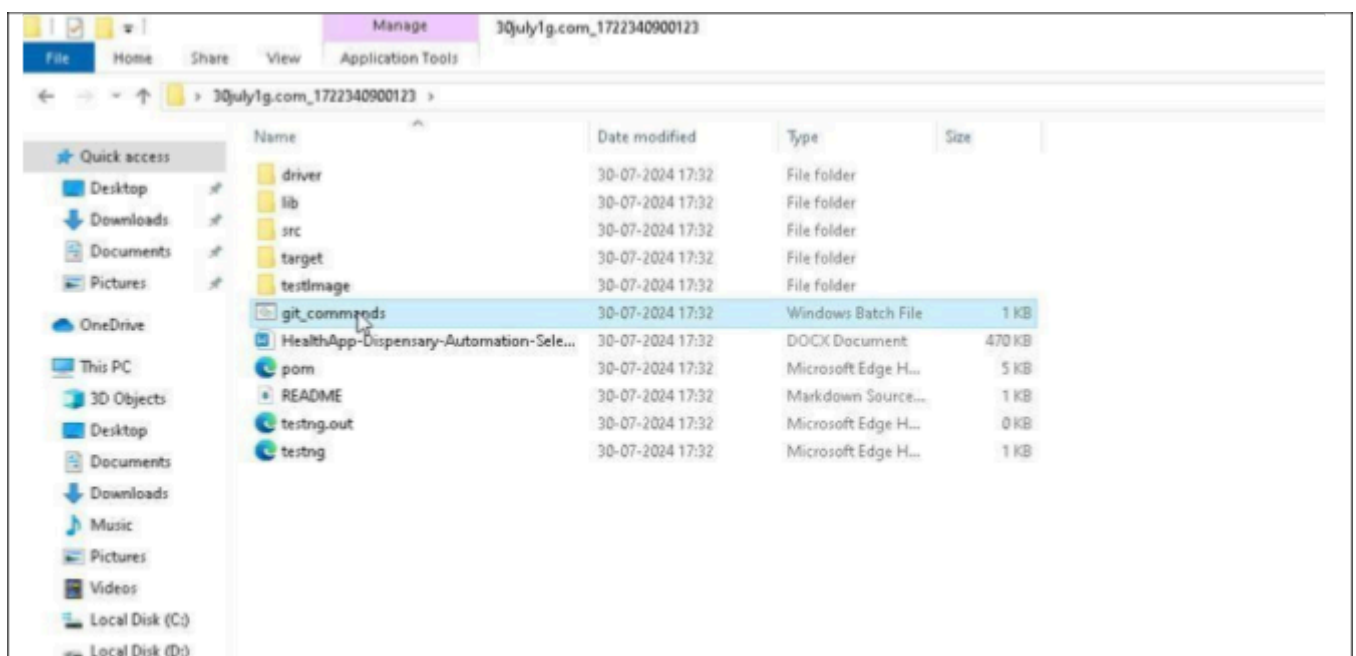

1. **You are mandatorily required to run test cases for applications before final submission. Without which project evaluation will not happen.**
2. **You can launch test cases any time as follows: Right click on testng.xml and run TestNGSuite**

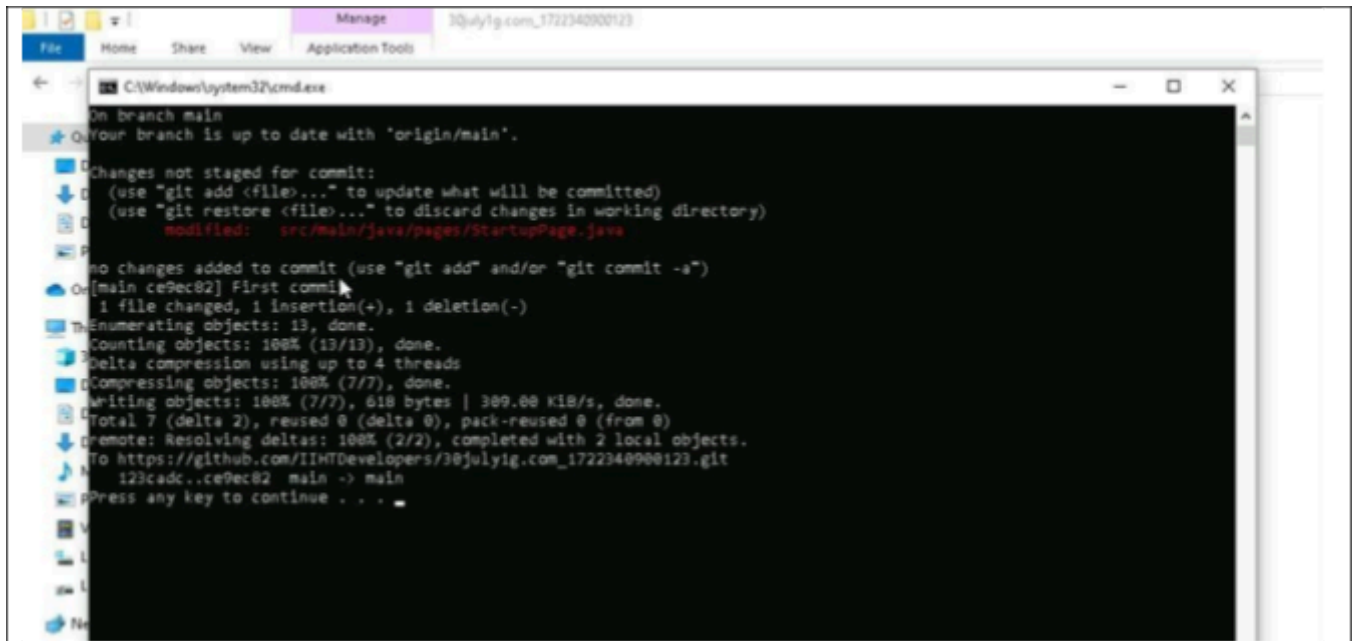

3. Before final submission, you are also required to push your code to GIT. Following are the steps to follow:

In your project folder, you will find a batch file named git\_commands

Double-click the batch file to run it. It will run the commands to push your code to GIT.

A screenshot of a Windows command prompt window titled "C:\Windows\system32\cmd.exe". The window shows the output of a Git commit and push command. The text is as follows:

```
On branch main
Your branch is up to date with 'origin/main'.

Changes not staged for commit:
  (use "git add <file>..." to update what will be committed)
  (use "git restore <file>..." to discard changes in working directory)
        modified:   src/main/java/pages/StartupPage.java

no changes added to commit (use "git add" and/or "git commit -s")
